

DATA & AI SUMMIT · HACKATHON 3.0

DSN X BCT LLM Agent Challenge

Design agents that understand how people behave, what they want, and what they'll choose next.

May 1 – Jun 10

Prize Pool · Top 4

Open · Students

THE CHALLENGE

About This Competition

Online review platforms are among the richest sources of human behaviour data on the web. Every rating, every review, every browsing session is a signal — a window into preference, context, and decision-making. Yet most AI systems still treat users as static profiles rather than dynamic, context-sensitive agents.

This challenge is our investment in changing that. We are looking for the sharpest minds working on LLM based user modeling and intelligent recommendation — and we want to give them the stage to do their best work.

Top performers will be invited to a talent conversation with Bluechip Tech's data and AI practice leads.

COMPETITION STRUCTURE

Two Task. One Ambition.

TASK A

User Modeling

Build an agent that understands users deeply enough to simulate their reviews — capturing tone, rating behaviour, and contextual nuance.

- › Simulate star ratings and written reviews for unseen items
- › Leverage user history, item metadata, and contextual signals
- › Evaluated on review quality, rating accuracy, and behavioural fidelity

TASK B

Recommendation

Build an agent that delivers personalised recommendations — going beyond collaborative filtering to contextual, conversational retrieval.

- › Rank and recommend items tailored to individual user context
- › Handle cold-start, cross-domain, and multiturn scenarios
- › Design agentic workflows that reason before recommending

Where you can get Dataset: Yelp, Amazon Reviews, and Goodreads — three large-scale, real world platforms with rich behavioral and textual signals.

SCORING

How Winners Are Chosen

Task A · User Modeling	Task B · Recommendation	Pts
Review Text Quality (ROUGE / BERTScore)	Ranking Quality (NDCG@10 / Hit Rate)	30
Rating Accuracy (RMSE)	Cold-Start & Cross-Domain	25
Behavioural Fidelity (human eval)	Contextual Relevance (human eval)	20
Solution Paper	Solution Paper	15
Code Reproducibility	Code Reproducibility	10

“A model score reflects what your machine did. A solution paper reveals what you understood. Both matter — but in a talent-identification context, the paper is what we read first.” Additional marks if contextualized to behave and sound like Nigerians

TIMELINE

Key Milestones

4 May 2026	Hackathon Launch Competition opens. Datasets and problem statements released. Teams register and join the WhatsApp community for all updates and announcements.
24 May 2026 · End of Day	Submission Deadline — All Three Deliverables Final model submission + solution paper (4–8 pages) + code repository must all be submitted via the form before midnight. No extensions will be granted.
25 – 29 May 2026	Judging Panel Review Judges evaluate all solution papers alongside model performance using the 100-point rubric. Human evaluation of behavioural fidelity is conducted during this window.
29 May – 1 June 2026	Top 4 Teams Notified Top 4 teams from are notified by email and invited to present live at the Data & AI Summit showcase.

1 – 8 June 2026

Presentation Deck Submission

Shortlisted teams submit their final presentation deck via the submission form. Presentation slot schedules will be shared upon notification.

10 June 2026

Winner Announcement & Prize Ceremony

Live presentations at the Data & AI Summit. Winners announced on stage.

DELIVERABLES

Three Submissions. All Required.

01

Link to the Agent built

Task 1:

You are required to submit a containerized application with either a web application or an API endpoint. The system should take user persona and product details as input, and generate reviews and ratings as output.

Task 2:

You are required to submit a containerized application with either a web application or an API endpoint. The system should take user persona as input and produce personalized recommendations as output. (Examples of product can include Movies, food, drinks etc)

02

Solution Paper (4–8 Pages)

A write-up covering your approach, architecture decisions, experiments run, ablation studies, and what could be done with more time. This is the primary talent signal and what judges read first. Originality and clarity of reasoning are rewarded above raw performance.

03

Code Repository

A clean, documented, reproducible codebase submitted via GitHub or equivalent. Judges will attempt to run it. Bonus credit is awarded for a clear README, modular design, and well commented agentic workflow logic.

PRIZES

What's at Stake

1st	₦ 1,500,000
2nd	₦ 1,000,000
3rd	₦ 750,000
4th	₦ 200,000
5th to 9th	₦ 100,000
10th	₦ 50,000

ELIGIBILITY

Who Can Enter

ELIGIBLE	NOT ELIGIBLE
✓ Undergraduate, Postgraduate, and PhD ✓ Teams of 1-4 members (all must be eligible students)	✗ Sharing solutions or code across competing teams ✗ Teams submit only one task
✓ Use of public pre-trained models and opensource frameworks (with disclosure) ✓ Use of additional datasets with appropriate disclosure	

Each team needs to compete the two task.
